Project Submission Report- 4th day- Faris

1. Task Title

Navigation, Admin Panel, Feedback System, Contact Page, Dark Theme & Quick Session Section Enhancements

2. Approach / Methodology

- Updated navigation to display different menus for public users vs signed-in users. Added "View Opportunities" page under "Our Faculty."

- Fixed Admin Panel data fetching and ensured dashboard metrics load properly.

- Structured Admin Panel for various tabs.

- Built Feedback System for signed-in users with 5 emoji expressions, live preview, and display of feedback on both public site and Admin Panel.

- Made Contact page form functional and submissions persist in the database, also visible in Admin Panel.

- Redesigned dark theme for readability, consistent components, and better UI contrast.

- Replaced Quick Session section buttons with Book Session, Our Faculty, Approaches.

3. Difficulties Faced

- Making the feedback system consistent across public, user, and admin views.

- Dark theme styling required retesting on multiple components for visibility.

- *Both studying and implementing tasks are consuming more time, so if possible, reducing the number of daily tasks would be a great help for maintaining quality.*

4. Solutions

- Used API integration fixes and validations for reliable data fetching in Admin Panel.

- Applied theme context globally and rechecked all components for consistent dark theme behavior.

- Debugged form submissions and ensured persistence in DB.

5. Learning & Takeaways

- Experience with building feedback systems with multiple views.

- Improved knowledge in global theming and UI consistency.

- Learned to optimize DB persistence for forms like Contact and Feedback.

6. Self-Reflection

- Could have planned the dark theme cleanup earlier to avoid rework.

- Need to pace learning and implementation better to handle time constraints.

- Will focus on modular coding and reusability to reduce repetitive effort.

7. Overall Summary

Today's work included navigation restructuring, a functional and role-based Panel, feedback system, improved dark theme, and a fully working contact page. Despite the progress, studying and implementing together is time-consuming, and reducing task volume would help deliver higher-quality outputs. The project is steadily becoming more user-friendly and efficient with each update.
